Georgia Technology for All White Paper Project

Georgia **Technology** Project

Our world is changing due to the technologies we all use daily to enhance our lives.

These include smartphones, Alexa, Siri, remote supports, apps, appointment reminders, telehealth, door ringers, voice controls, and many more.

People with Intellectual and Developmental Disabilities have been left out of the benefit of technology.

This is caused by the digital divide, cost and complexity.

THE GEORGIA TECHNOLOGY WHITE PAPER PROJECT IS ATTEMPTING TO CHANGE THIS.

Finally bringing the **same technologies we use every day** to people with Intellectual and Developmental Disabilities.

WE NEED YOUR HELP

Please **take the Technology for All Survey** yourself or with a person with disability to help us create this future.
