

Help Us Tell Your Story

We are conducting a study exploring caregivers' experience of training they received from public schools to support their child's use of augmentative and alternative communication (AAC) methods to communicate.

What will participants be asked to do?

Using Zoom, caregivers will be interviewed by a researcher about their training experience. Interviews are expected to last no more than 1 hour.

Who can participate?

- Parents or caregivers of a living child between the ages of 17-26
- At any time, your child had a goal on their Individual Education Program (IEP) to learn how to communicate using AAC communication.
